

YYQ-1600 horizontal hard support balancing machine

I. Product Introduction

This series of horizontal hard-support balancing machines uses roller support and ring belt drag, with data processing by an industrial control computer, real-time display of unbalance values, phase angles, and real-time rotational speed. The bed is made of solid casting for good stability. Due to the use of relatively soft flat belts to drag the workpiece, there is no additional unbalance interference, so the measurement accuracy is high and the structure is simple. It is widely used in the industries of electric motors, fans, diesel engines, automotive parts, etc. Balance measurements can be performed on single, double, and multiple calibration surfaces. It is suitable for

shafts, disks, and center-of-gravity extended rotors. It has the characteristics of high efficiency, accurate precision, intuitive display, reliable quality, and convenient maintenance. It is the first choice for general dynamic balancing workpieces. The software has two calibration functions for common workpieces and standard rotors, overcoming the defect that users of other hard-support balancing machine measurement systems have difficulty calibrating the equipment themselves. There are multiple measurement methods and functions to choose from, which can achieve parameter input, preview, test, result storage, printing, and operation of all Chinese menu structures. Human-computer dialogue and automatic prompting.

二、Main Technical Parameters

1. Workpiece quality range kg: 30-1600

HENGXU

2. Workpiece diameter mm: Φ1800

3. Distance between two supports mm: 150-2600

4. Range of shaft diameter mm: Φ 20-240

5. Diameter range of the drag area of the loop belt mm: Φ 40-800

6. Balance speed r/min: 180-1450

7. Minimum achievable residual unbalance gmm/kg: ≤0.5

8. Reduction rate of unbalance: ≥ 90

9. Motor power kw: 7.5

三、Measuring system

★ Industrial control computer, 19-inch LCD display (touch screen can be equipped according to customer needs), Windows operating platform

★ Equipped with our company's self-developed universal balance measurement system. The universal software features cover all functions of the mainstream balance machine software in China, and the operation is all in Chinese menu structure with text prompts for steps.

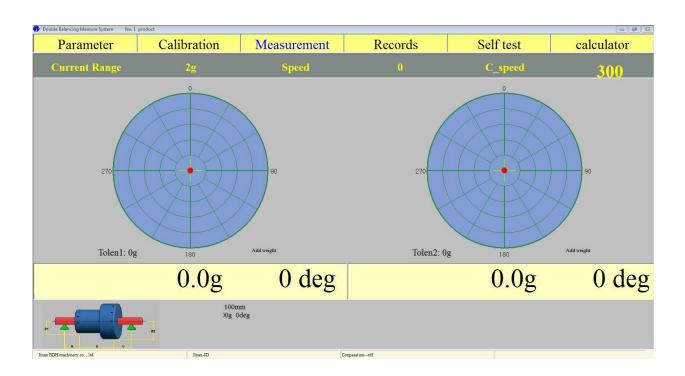

★ The measuring system has powerful performance: any workpiece calibration, wide measurement speed range starting from 80 rpm, measurement speed block, unbalance amplitude and phase stability, high deweighting rate and separation ratio, high sensitivity

★ The software comes with an unbalance calculator. The operator only needs to enter the vibration accuracy level, mass, working speed, and radius points of the workpiece, and click on the calculation to get the grams of allowable residual unbalance of the

workpiece.

- ★ The software is completely self-developed and can be modified or added to software functions according to customer requirements Mechanical parts and control
- ★ Hard or soft support swinging frame and casting bed, better equipment stability, wide measurement speed range
- ★The swing frame can move along the bed and stop at any position above the bed, so the equipment can balance workpieces of any length.
- ★With angle tracking function, it is convenient to find the unbalance angle.
- ★ Using a variable frequency speed regulation system, the starting time of the equipment motor can be adjusted according to needs, making it easy to use.

Series of Dynamic Balance Proposal

V. Confidentiality of Technical Information and Materials

1. This technical solution belongs to our company's technical information, and without

permission, the information should not be disseminated to third parties. Users should

be obligated to keep confidential the technical intelligence and information provided

by us. This clause is valid for a long time, regardless of whether this solution is

adopted or not;

2. We shall also be responsible for confidentiality of technical information and

materials provided by users.

VI. After-sales Service

The warranty period is one year from the date of acceptance, with lifelong

maintenance. Within one year, all services are free of charge, including free on-site

installation and debugging of new machines, and free training for operators.

1. The test equipment provided shall comply with the current national standards

or industrial standards to ensure the technical progressiveness and reliability of the test

equipment;

2. The required parts and accessories are available all year round;

3. Perennial technical support for products, providing solutions for product

maintenance within 24 hours, and arriving within 48 hours for on-site solutions;

4. The software is free to upgrade for life.
